Data fields covered include state, odor, color, autoignition temperature, probability of biodegradation, and much more. Recommendations are given for specific products, processing methods, and mold materials, and an assessment is given for each additive ' s features and benefits. Contains the most extensive data available on a large number of antiblocking, release and slip additives for polymers Features 130 data fields for each additive that are divided into General Information, Physical Properties, Health and Safety, Ecological Properties, and Use and Performance Includes an assessment of the benefits and properties of each additive, recommended dosages and processing methods

The Ecology of Building Materials explores key questions surrounding sustainability of building materials. It provides technical data to enable design and building professionals to choose the most appropriate materials for a project: those that are least polluting, most energy efficient, and from sustainable sources. The book also gives information and guidance on a wide range of issues such as recycling, detailing for increased durability and Life Cycle Analysis. Berge ' s book, translated from the Norwegian by Chris Butters and Filip Henley, offers safe and environmentally friendly material options. It provides an essential and easy-to-use reference guide to this complex subject for the building industry professional. New to this edition:

- Thorough exploration of building materials in relation to climate change issues
- Extensive updating of basic data, as well as the introduction of a wide range of new materials
- Methods for recycling and reuse of materials
- More information on the interaction between materials and the indoor environment, ventilation and energy use
- Full colour text and user-friendly larger format

Bj ø rn Berge is a practicing architect, researcher and lecturer. Since the 1970s, he has written several books on building ecology for the Scandinavian public. He is one of the founders of Gaia Architects who have developed a wide range of pioneering techniques in sustainable building.
