Islamic banking has seen rapid growth during the last two decades. This is a result of the liberalization of financial regulation, the globalization of financial markets, technological changes, product innovation, the birth of several new Islamic States, and a growing Islamic presence in the West, among other factors. New innovations have allowed economists and religious scholars to bring new products to almost all areas of banking and insurance, products which would previously have been extremely controversial. This book provides a better understanding of the Muslim community around the

Download File PDF An Ysis Of Islamic Banking And Finance In West From

world of Islamic economics and its importance, especially in these days of financial crisis. The book will also serve as a reference manual for teaching the theory and practice of Islamic banking and Islamic financial innovations around the world. Islamic finance courses at universities are highly important since Islamic financial innovations remain very limited, and additional efforts have to be made in this area.

While creating new forms (Shari'ah-compliant standards) to operationalize Islamic values and ethics into the current conventional economic system and banking products is crucial to sustain the Islamic economy as it is today, we also need to develop new strategies to cope with the next economic evolution. The digital revolution in financial services is under way, and digital disruption has the potential to shrink the role and relevance of today's banks, while simultaneously creating better, faster, cheaper services that will be an essential part of everyday life. This forward-looking book discusses the crucial innovation, structural and institutional development for financial technologies (fintech) in Islamic finance. The authors explain concepts in fintech and blockchain technology and follow through with their applications, challenges and evolving nature. The book provides insights into technology which will enable and enhance actual prescribed Islamic behaviors in modern economic transactions. Case studies highlight how to cope with modern transactional behavior with the advent of global online/mobile markets, shorter attention spans, and impersonal trade exchange.

Islamic finance is emerging as a rapidly growing part of the financial sector in the Islamic world and is not restricted to Islamic countries, but is spreading wherever there is a sizable Muslim community. According to some estimates, more than 250 financial institutions in over 45 countries practice some form of Islamic finance, and the industry has been growing at a rate of more than 15 percent annually for the past several years. The market's current annual turnover is estimated to be \$70 billion, compared with a mere \$5 billion in 1985, and is projected to hit the \$100 billion mark by the turn of the century. Since the emergence of Islamic banks in the early 1970s, considerable research has been conducted, mainly focusing on the viability, design and operations of a deposit-accepting financial institution, which operates primarily on the basis of profit and loss partnerships rather than interest. This publication provides a comprehensive overview of topics related to the assessment, analysis, and management of various types of risks in the field of Islamic banking. It is an attempt to provide a high-level framework (aimed at non-specialist executives) attuned to the current realities of changing economies and Islamic financial markets. This approach emphasizes the accountability of key players in the corporate governance process in relation to the management of different dimensions of Islamic financial risk.

In the present financial world, various niche markets play an increasingly important role. One of the fastest-growing niches is, without a doubt, Islamic finance. Indeed, sustainable finance needs constantly evolving innovations, and this book offers valuable insights into Islamic capital structure and Shari'ah equity screening enriching academic discourse. "In recent years, we have witnessed the emergence of a new generation of academics and professionals specializing in various aspects of Islamic finance as knowledge and practice. This has brought about a new dynamism and also further sophistication. This book is one of such contributions, as it develops knowledge which is then transformed into practice whereby practical impact is also achieved. Being an academic book, it provokes readers' thoughts, offering a critique of the implications of the currently applied Shari'ah screenings methodologies. As a transformative practical piece, by developing an innovative screening ratio, in this book, Dr. Yildirim extends his focus on the risk-sharing based financing hierarchy, covers thoughts and the underlying philosophy, and proposes an Islamic version of a pecking order hierarchy. This framework can be considered the foundation for developing an Islamic capital structure theory. This book will benefit academics, professionals, investors, as well as policymakers working in the Islamic finance industry and would like to explore more." (Professor Dr. Mehmet Asutay, Durham University Business School, UK) "This book offers, for the first time after the inception of Shari'ah screening methodologies, a groundbreaking new stock screening solution that is comprehensible, practical, and foremost entirely derived from the primary sources of Islam (Qur'an and Sunnah). Congratulations to Dr. Ramazan for his outstanding contribution to Islamic finance and capital markets." (Associate Professor Dr. Ahcene Lahsasna) "This excellent book is a must-have for all corporate finance students/researchers interested in the theoretical aspect of capital structure and the religious discussion of Shari'ah equity screening. This book should become a companion to those involved in a quantitative research environment and aim to conduct a comparative analysis; an ideal resource for everyone, from Shari'ah scholars to Islamic finance practitioners and beginners to experts." (Professor Dr. M. Kabir Hassan, University of New Orleans, USA)

Information about Islamic finance in European countries is usually provided by professional-style reports, offering practical data on implementation of standardized products. However, precise developments about material legal provisions applicable to contracts and their actual legal regime are not often detailed. In order to fill this gap, 15 researchers from across Europe contributed to this project. They describe the state of actual Islamic finance in 10 European countries, as well as applicable EU law. By combining legal analysis with statistical description of existing practices and social demand, this book provides an exhaustive account of the current potential of Islamic finance in

Europe.

The concept of risk-sharing in financial and social contracts is one of the unique features of Islamic finance. Many theoretical studies generally claim superiority of an Islamic financial system based on pure equity and participatory modes of financing, while empirical studies provide mixed results. Studies and discussions are needed to fully understand how Islamic finance could contribute to the ongoing discussion of financial stability. Against this background, this book addresses various aspects of Islamic finance and the risk-sharing mechanism contributions to the overall macroeconomic and financial stability. Undoubtedly, the findings and recommendation from this book should be of great interest not only to future academic researchers in the field of macroeconomic stability and Islamic finance, but also to policy makers and regulators who are keen on drawing lessons from Islamic finance experiences to prevent similar crisis in the future.

Covering essential elements of Islamic Banking and Finance, as well as the latest views on topical debates surrounding the discipline, this text is essential reading for anyone seeking to understand this increasingly important sector of the finance industry. Written by Islamic scholars in the Arab world, this text gives new and pertinent insights into Islamic Banking and Finance, and its global impact.

This book provides an overview of the practice of Islamic finance and the historical roots that define its modes of operation. The focus of the book is analytical and forward-looking. It shows that Islamic finance exists mainly as a form of rent-seeking legal-arbitrage. In every aspect of finance - from personal loans to investment banking, and from market structure to corporate governance - Islamic finance aims to replicate in Islamic forms the substantive functions of contemporary financial instruments, markets, and institutions. By attempting to replicate the substance of contemporary financial practice using pre-modern contract forms, Islamic finance has arguably failed to serve the objectives of Islamic law. This book proposes refocusing Islamic finance on substance rather than form. This approach would entail abandoning the paradigm of 'Islamization' of every financial practice. It would also entail reorienting the brand-name of Islamic finance to emphasize issues of community banking, micro-finance, and socially responsible investment.

In this issue, we have presented issues relevant to the most recent debate on the performance, practices, and principles of the Islamic finance industry as a whole, covering eleven distinct issues.

The current Global Financial Stability Report (April 2016) finds that global financial stability risks

Download File PDF An Ysis Of Islamic Banking And Finance In West From

have risen since the last report in October 2015. The new report finds that the outlook has deteriorated in advanced economies because of heightened uncertainty and setbacks to growth and confidence, while declines in oil and commodity prices and slower growth have kept risks elevated in emerging markets. These developments have tightened financial conditions, reduced risk appetite, raised credit risks, and stymied balance sheet repair. A broad-based policy response is needed to secure financial stability. Advanced economies must deal with crisis legacy issues, emerging markets need to bolster their resilience to global headwinds, and the resilience of market liquidity should be enhanced. The report also examines financial spillovers from emerging market economies and finds that they have risen substantially. This implies that when assessing macro-financial conditions, policymakers may need to increasingly take into account economic developments in emerging market economies. Finally, the report assesses changes in the systemic importance of insurers, finding that across advanced economies the contribution of life insurers to systemic risk has increased in recent years. The results suggest that supervisors and regulators should take a more macroprudential approach to the sector.
