

Bifunctional Compounds

Thank you very much for reading bifunctional compounds. Maybe you have knowledge that, people have search hundreds times for their favorite novels like this bifunctional compounds, but end up in infectious downloads.

Rather than reading a good book with a cup of coffee in the afternoon, instead they juggled with some harmful bugs inside their desktop computer.

bifunctional compounds is available in our book collection an online access to it is set as public so you can download it instantly.

Our books collection saves in multiple countries, allowing you to get the most less latency time to download any of our books like this one.

Kindly say, the bifunctional compounds is universally compatible with any devices to read

A bifunctional molecule has the properties of two different types of functional groups, such as an alcohol (-OH), amide (CONH₂), aldehyde (-CHO), nitrile (-CN) or carboxylic acid (-COOH). Many bifunctional molecules are used to produce medicines and catalysts, while others are used in condensation polymerization like polyester and polyamide.

Bifunctional Compounds. Robert S. Ward. Oxford Chemistry Primers. Description. Most important organic molecules contain more than one functional group, and very often the interaction between these groups determines the chemical and biological behavior of the compounds. This concise text outlines some of the methods used to prepare bifunctional compounds and then surveys the chemistry of some of the more important classes.

Reported herein are two bifunctional compounds (BFCs) L1 and L2 that contain both amyloid-binding and metal-chelating molecular motifs. Both L1 and L2 exhibit high stability constants for Cu²⁺ and Zn²⁺ and thus are good chelators for these metal ions. In addition, L1 and L2 show strong affinity toward A species.

In monomer ... feature of a monomer is polyfunctionality, the capacity to form chemical bonds to at least two other monomer molecules. Bifunctional monomers can form only linear, chainlike polymers, but monomers of higher functionality yield cross-linked, network polymeric products.

The bifunctional bisphosphino-iminato ligand syn-L was prepared by following the general condensation methodology outlined in Scheme 1. In CH₂Cl₂, condensation of 1,8-diaminoanthracene with 2 equiv of 2-diphenylphosphinobenzaldehyde in the presence of p-TsOH at room temperature afforded the ligand syn-L in high yield (88%).
