Approximately 29 million Americans are diagnosed with Type 2 diabetes annually. Of that number, only about 36 percent (10.44 million diabetes sufferers) achieve satisfactory medical outcomes and would need additional help—rarely available—to reliably control their glucose levels. Contrary to popular belief, although anti-diabetic medications can lower sugar levels, nevertheless they have a poor performance track record because inflammation in the blood vessels persists. This book details recent scientific findings that cardiovascular, kidney, vision, peripheral nervous system, and other body damage caused by chronic high levels of blood sugar (hyperglycemia) in Type 2 diabetes is actually due to excessive generation of unopposed free radicals and reactive oxygen species (ROS). These, in turn, cause chronic systemic inflammation and dysfunction of the endothelial lining of the arterial blood vessels, jeopardizing the formation of the protective molecule nitric oxide (NO), thus severely impairing the blood supply to every organ and tissue in the body. This book also catalogues the evidence that chronic hyperglycemia causes profound and often irreversible damage—even long before Type 2 diabetes has been diagnosed. In addition, because conventional prescription treatments are, unfortunately, often inadequate, the book details evidence-based complementary means of blood sugar control.

When it comes to helping customers make wiser and safer choices in their use of over-the-counter treatments, the pharmacist's best source of information is Nonprescription Product Therapeutics. This text emphasizes the pharmacist's role in triage--assessing the best nonprescription products for a client and knowing when medical conditions warrant a referral to another health professional. Organized by condition rather than by drug, the text is easy to consult, and complements a disease-based approach to therapeutics. Pharmacists will find useful information on ingredients, interactions, contraindications, and other essentials for helping customers choose appropriate nonprescription products. The Second Edition contains additional charts, drawings, illustrations, and tables. The book includes decision-making algorithms, case studies, patient counseling tips, and warnings on dangerous or life-threatening ingredients, actions, or situations. Another unique feature of this text is A Pharmacist's Journal--real-life reports from the front lines by an award-winning professor and researcher with over twenty years of experience in retail community pharmacy.
