In Spring's approach to building RESTful web services, HTTP requests are handled by a controller. These components are identified by the `@RestController` annotation, and the `GreetingController` shown in the following listing (from `src/main/java/com/example/restservice/GreetingController.java`) handles GET requests for `/greeting` by returning a new instance of the `Greeting` class:

Getting Started | Building a RESTful Web Service

In case you don't have the option to use Spring Boot, just navigate to the second part of this post for using traditional way to of Building Restful Web Services with Spring. 1. Build Restful Web Services using Spring Boot. There are multiple ways of creating REST services using Spring Boot. Here are the different options. Spring Boot Initializr.
