(UVC) of the Society for Mining, Metallurgy & Exploration (SME). The Mine Ventilation Symposium series has always been a premier forum for ventilation experts, practitioners, educators, students, regulators, and manufacturers from around the world to exchange knowledge, ideas, and opinions. This volume features fifty-seven selected technical papers in a wide range of topics including: auxiliary ventilation, case studies of mine ventilation, computational fluid dynamics applications in mine ventilation, diesel particulate control, electric machinery in mine ventilation, mine cooling and refrigeration, mine dust monitoring and control, mine fans, mine fires and explosion prevention, mine gases, mine heat, mine management and organization of ventilation, mine ventilation and automation, occupational health and safety in mine ventilation, renewable/alternative energy in mine ventilation, ventilation monitoring and measurement, ventilation network analysis and optimization, and ventilation planning and design.

Raymond Williams' reputation rests mainly on his contribution to literary and cultural studies, but he was also an important critic and theoretician in the field of drama. "Drama in Performance", first published in 1954, pioneered a method of dramaturgical rather than literary-critical analysis of plays, locating dramatic texts in the conditions and conventions of their original performance and reading them to disclose their performance potentialities. This method, which anticipated such contemporary developments as performance analysis and the semiotics of drama, is here applied to representative texts from key periods of the history of drama: the Greek stage, the medieval theatre-in-the-round and pageant-wagon, the Elizabethan public playhouse, London commercial theatres from the Restoration to the late 19th century, the naturalist stage of the Moscow Art Theatre, 20th century

experimental drama, and contemporary film. This edition presents the text as Williams revised it in 1966. In addition it provides an updated bibliography of work in this field, a complete listing of all Williams' relevant writings, and a new Introduction (by Graham Holderness) which locates the book both within modern dramatic theory and criticism and within Williams' own work and demonstrates its continuing challenge and relevance.

A hydrogen economy, in which this one gas provides the source of all energy needs, is often touted as the long-term solution to the environmental and security problems associated with fossil fuels. However, before hydrogen can be used as fuel on a global scale we must establish cost effective means of producing, storing, and distributing the gas, develop cost efficient technologies for converting hydrogen to electricity (e.g. fuel cells), and creating the infrastructure to support all this. Sorensen is the only text available that provides up to date coverage of all these issues at a level appropriate for the technical reader. The book not only describes the "how" and "where" aspects of hydrogen fuels cells usage, but also the obstacles and benefits of its use, as well as the social implications (both economically and environmental). Written by a world-renowned researcher in energy systems, this thoroughly illustrated and cross-referenced book is an excellent reference for researchers, professionals and students in the field of renewable energy. Updated sections on PEM fuel cells, Molten carbonate cells, Solid Oxide cells and Biofuel cells Updated material to reflect the growing commercial acceptance of stationary and portable fuel cell systems, while also recognizing the ongoing research in automotive fuel cell systems A new example of a regional system based on renewable energy sources reflects the growing international attention to uses of renewable
