In The Breakthrough Company, Keith McFarland pinpoints how everyday companies become extraordinary, showing that luck is a negligible factor. Rather, breakthrough success turns out to be associated with a clearly identifiable set of strategies and skills that anyone in any business can emulate - from small startup to industry paragon. Encouraged by experts such as business legend Peter Drucker and Good to Great author Jim Collins to identify the drivers that enable a company to push past the entrepreneurial phase, McFarland spent five years building and analyzing the world's largest growth-company performance database and interviewing more than 1,500 growth-company executives on four continents. His goal was simple: to identify the secrets of breakthrough. This book is the result. Winnowing a study pool of more than 7,000 companies down to nine that have made the transition to major-player status, McFarland highlights real-world tools and myth-busting insights that can be used by anyone wanting his or her business to join this exclusive circle.

Container et Prefab House Plans contain more than 250 floor and elevation plans, as well as constructive details of 36 housing projects, both prefabricated and made with cargo containers. As of 2016, the average home price was \$356,200. How many of the younger demographic of the home buying age is having to count every penny just to stay a bit ahead of the game? You see, with a shipping container home, you could get a finished home for a fraction of the cost of a traditional home.

Prefab home construction has arrived. The benefits of buildings a prefab home (they are better built, use resources more efficiently, and are healthier to live in) apply just as well to vacation homes as they do to primary residences. Prefabulous Small Houses explores the beauty, variety, design, and environmentally positive benefits of prefab construction through the wide variety of prefabrication methods in use today and with prefabulous examples from across the country. The houses range in size from 400 sq. ft. to 2,000 sq. ft. and are built with modular, SIPs, panelized, log home packages, kit packages, and hybrid systems. Building with prefab usually means spending less for a better quality home. And it also means building greener; all the houses featured are highly energy efficient and sustainable.

Prefabrication and Architecture, a manual about prefab architecture, is primarily written for the architect and construction professional. it is the only professional reference on prefab architecture, with information on the many facets of off-site construction. Prefabrication can allow for greater efficiency and precision, lessen environmental impact, and shorten construction cycles. Smith offers designers and construction professionals guidelines that rethink all stages of the design process in order to effectively utilize the fabrication process.

At Dwell, we're staging a minor revolution. We think that it's possible to live in a house or apartment by a bold modern architect, to own furniture and products that are exceptionally well designed, and still be a regular human being. We think that good design is an integral part of real life. And that real life has been conspicuous by its absence in most design and architecture magazines.

Adam Kalkin's projects using containers to build houses.

LOT-EK is a design practice that believes in being unoriginal, ugly, and cheap. Also in being revolutionary, gorgeous, and completely luxurious. LOT-EK ' s work reveals extraordinary transformations of ordinary things—from their famous shipping container projects onward—combining maker culture and hacker culture into beautiful and radical visions for sustainable and meaningful living. LOT-EK: Objects + Operations surveys dozens of projects—built, unbuilt and in-progress; polemical, practical, and in-between—complemented by photographs from LOT-EK ' s multi-year URBAN SCAN project, a vast photographic document of infrastructure and incident, as well as essays by Thomas de Monchaux and interviews with founding partners Ada Tolla and Giuseppe Lignano.

For a number of years, modular construction – the use of prefabricated elements in architecture – has once again become a subject of lively discussion and debate. Long written off as monotonous, today ' s building components are actually highly differentiated and capable of supporting and enhancing the architect ' s creativity. Numerous structures work with prefabricated components; for single-family homes the figure is ninety-eight percent, and modular systems are available that meet high aesthetic standards. This book provides an overview of the various different systems and their possible uses, particularly in the areas of housing, office, and industrial buildings. It explains the processes and components of modular construction and the behavior of the various materials when this construction approach is used. The authors offer strategies for planning and designing with prefabricated systems so that the architect can use them productively. Numerous drawings explain the principles of modular construction, while built examples forge a link between those principles and the practical activity of building.

Explores the dramatic new developments in prefabricated home design, discussing the benefits of such systems as timber frame, log, and modular construction and featuring a wide array of home styles, from small to large, that are available to prospective homeowners.
