Energy security - Wikipedia

Sooner or later, oil, gas, coal and new energy sources will each account for a quarter of global energy consumption in the new era. Although the fossil energy is still plenty in the world, great breakthroughs made in some key technologies and the increasing demand for ecological environmental protection both impel the third transformation.

Energy revolution: From a fossil energy era to a new -

Energy Security The ability of a nation to secure sufficient, affordable and consistent energy supplies for its domestic, industrial, transport and military requirements is termed Energy Security. It means that current and future energy needs have a high probability of being met, irrespective of economic or political instability.
