(vs Manual flash) *Flash Photography for Film Shooters Using The Guide Number System* [How To Set Your Aperture, Shutter Speed and ISO When Shooting Flash | Q\u0026A Ep.39 pt2 Learn The S1 \u0026 S2 Modes Of Flashes](#) *Flash Photography Lecture Part Five* **Flash Guide Numbers Stops of light and flash power (Flash photography Lesson 7)** [Guide Number For Flash Explanation](#)

Guide Number (GN) is a numerical method used to determine exposure of direct flash for Manual flash power levels, to automatically deal with the Inverse Square Law, making the math be trivial. The reference base is a known accurate Guide Number for one situation, from which other situations can be calculated.

Flash Guide Number - The Digital SLR Guide

Guide Number, usually abbreviated GN, determines power rating of flash unit that describes how powerful flash unit is and how far it can shoot. In another word, GN specifies the power of an electronic flash in a way that it can be used to determine the right f-stop to use at a particular shooting distance and ISO setting.

Understanding Flash's Guide Number (GN) — Daily ...

Read Online Guide Number For Flash Explanation

The higher the guide number the further the flash will reach. The specifications will also show the flash settings at which the guide number is calculated, including the ISO and flash zoom setting. I use the cheap Godox units. They have a guide number of 60 meters, calculated at ISO100 and a full flash zoom setting of 200mm.

[Guide Numbers Explained for Manual Flash - Calculator ...](#)

Your flash's Guide Number (GN) is determined at 100 ISO, when it gives correct exposure at a certain distance, multiplied by the f-stop. The idea that we can figure out the manual flash exposure by the combination of distance and aperture (for a given ISO setting), was covered in these recent topics:

[Tutorial: How to use the guide number of your flash - Tangents](#)

Read Online Guide Number For Flash Explanation

GN = Subject Distance from Flash Source
x f/Stop. Guide numbers are based on a
simple mathematical equation that states:
the light output of an electronic flash is
equal to the distance of the flash unit from
the subject multiplied by the lens aperture,
or f/stop.

Understanding Guide Numbers | B&H Explora

A flash's power is determined by its
Guide Number, with low Guide Numbers
(GN) indicating a weak or less powerful
flash than one with a high GN. For ease of
comparison, most flash GNs are rated for
an ISO 100 film. If you use a film with a
lower ISO the GN will be lower, and,
conversely, if you use a higher speed film
the GN will be higher.

Flash Photography - Understanding Guide Numbers

Read Online Guide Number For Flash Explanation

Qualification: Guide Number is of course very possible for manual HSS (if understood), but frankly, Guide Number does not seem useful for HSS flash, only because Guide Number is useful in dim light where flash is the full exposure, when there is little if any contribution from any ambient light.

Understanding Flash Guide Numbers, HSS GN Calculator

The flash guide number (GN) is a measure of the distance at which the flash can illuminate a subject. The higher the guide number, the greater the distance at which the light from the flash is sufficient for optimal exposure. The formula for calculating the guide number is as follows:
Guide number (GN)=distance (meters) × aperture (f-number)
