...

Recently, however, things have begun to shift in the other direction, and anthropologist Barbara J. King is at the forefront of that movement, arguing strenuously that we can—and should—attend to animal emotions. With *How Animals Grieve*, she draws our attention to the specific case of grief, and relates story after story—from fieldsites, farms, homes, and more—of animals mourning lost companions, mates, or friends.

with animals, we casually ascribe familiar emotions to them. But scientists have long cautioned against such anthropomorphizing, arguing that it limits our ability to truly comprehend the lives of other creatures.

Recently, however, things have begun to shift in the other direction, and anthropologist Barbara J. King is at the forefront of that movement, arguing strenuously that we can—and should—attend to animal emotions. With *How Animals Grieve*, she draws our attention to the specific case of grief, and relates story after story—from fieldsites, farms, homes, and more—of animals mourning lost companions, mates, or friends. King tells of elephants surrounding their matriarch as she weakens and dies, and, in the following days, attending to her corpse as if holding a vigil. A housecat loses her sister, from whom she's never before been parted, and spends weeks pacing the apartment, wailing plaintively. A baboon loses her daughter to a predator and sinks into grief. In each case, King uses her anthropological training to interpret and try to explain what we see—to help us understand this animal grief properly, as something neither the same as nor wholly different from the human experience of loss. The resulting book is both daring and down-to-earth, strikingly ambitious even as it's careful to acknowledge the limits of our understanding. Through the moving stories she chronicles and analyzes so beautifully, King brings us closer to the animals with whom we share a planet, and helps us see our own experiences, attachments, and emotions as part of a larger web of life, death, love, and loss.

Examines the nature of grief in animals, providing

# Acces PDF How Animals Grieve Barbara J King

examples of how animals as diverse as ants and elephants mourn their dead, and advocates for increased attention to animal emotions.

Human attitudes towards other species are inevitably complex. We love the dog and eat the pig, or, we love the bison and eat the bison. Who exactly are these fellow creatures? The newest science from anthropology, psychology, and zoology can help us figure out some answers to that question by showing us how the animals we eat-- for some the octopus or the chimpanzee, for many others the chicken and the goatthink, feel, and act as distinct individual beings. Who are we eating? In this insightful exploration of the animals that humans consume, Barbara King does not tell us what or whom we should be eating, but rather she invites us to a smorgasbord of thought and reflection on the sentience and behaviors of the consumed. By getting to know these animals better, we can begin to taste the different ways they experience the world with awareness and intention, and it brings greater connection between us and those animals than we encounter in shrink-wrapped grocery-store products. This book shows us how valuable it is to understand who we eat, no matter how varied that consumption is. From octopi to crickets to chimpanzees, the animals we consume deserve a better appreciation from all who encounter them in a culinary experience, and there is no host of this scientific and behavioral feast than Barbara King.

"

Religion has been a central part of human experience since at least the dawn of recorded history. The gods

change, as do the rituals, but the underlying desire remains—a desire to belong to something larger, greater, most lasting than our mortal, finite selves. But where did that desire come from? Can we explain its emergence through evolution? Yes, says biological anthropologist Barbara J. King—and doing so not only helps us to understand the religious imagination, but also reveals fascinating links to the lives and minds of our primate cousins. *Evolving God* draws on King's own fieldwork among primates in Africa and paleoanthropology of our extinct ancestors to offer a new way of thinking about the origins of religion, one that situates it in a deep need for emotional connection with others, a need we share with apes and monkeys. Though her thesis is provocative, and she's not above thoughtful speculation, King's argument is strongly rooted in close observation and analysis. She traces an evolutionary path that connects us to other primates, who, like us, display empathy, make meanings through interaction, create social rules, and display imagination—the basic building blocks of the religious imagination. With fresh insights, she responds to recent suggestions that chimpanzees are spiritual—or even religious—beings, and that our ancient humanlike cousins carefully disposed of their dead well before the time of Neandertals. King writes with a scientist's appreciation for evidence and argument, leavened with a deep empathy and admiration for the powerful desire to belong, a desire that not only brings us together with other humans, but with our closest animal relations as well.

A revelatory investigation of friendship, with profound

# Acces PDF How Animals Grieve Barbara J King

implications for our understanding of what humans and animals alike need to thrive across a lifetime. The phenomenon of friendship is universal and elemental. Friends, after all, are the family we choose. But what makes these bonds not just pleasant but essential, and how do they affect our bodies and our minds? In *Friendship*, science journalist Lydia Denworth takes us in search of friendship's biological, psychological, and evolutionary foundations. She finds friendship to be as old as early life on the African savannas—when tribes of people grew large enough for individuals to seek fulfillment of their social needs outside their immediate families. Denworth sees this urge to connect reflected in primates, too, taking us to a monkey sanctuary in Puerto Rico and a baboon colony in Kenya to examine social bonds that offer insight into our own. She meets scientists at the frontiers of brain and genetics research and discovers that friendship is reflected in our brain waves, our genomes, and our cardiovascular and immune systems; its opposite, loneliness, can kill. At long last, social connection is recognized as critical to wellness and longevity. With insight and warmth, Denworth weaves past and present, field biology and neuroscience, to show how our bodies and minds are designed for friendship across life stages, the processes by which healthy social bonds are developed and maintained, and how friendship is changing in the age of social media. Blending compelling science, storytelling, and a grand evolutionary perspective, Denworth delineates the essential role that cooperation and companionship play in creating human (and nonhuman) societies. *Friendship* illuminates the vital aspects of friendship,

# Acces PDF How Animals Grieve Barbara J King

both visible and invisible, and offers a refreshingly optimistic vision of human nature. It is a clarion call for putting positive relationships at the center of our lives.

In a book that draws on both personal stories and research presents an in-depth exploration of the practical, medical and moral issues that trouble pet owners confronted with the decline and death of their companion animals.

The “irresistible” New York Times bestseller that “features heartwarming stories of interspecies love and adorable photographs” (The New York Times Book Review). Written by National Geographic magazine writer Jennifer Holland, *Unlikely Friendships* documents one heartwarming tale after another of animals who, with nothing else in common, bond in the most unexpected ways. A cat and a bird. A mare and a fawn. An elephant and a sheep. A snake and a hamster. The well-documented stories of Koko the gorilla and All Ball the kitten; and the hippo Owen and the tortoise Mzee. And almost inexplicable stories of predators befriending prey—an Indian leopard slips into a village every night to sleep with a calf. A lioness mothers a baby oryx. Holland narrates the details and arc of each story, and offers insights into why—how the young leopard, probably motherless, sought maternal comfort with the calf, and how a baby oryx inspired the same mothering instinct in the lioness. Or, in the story of Cashew, the lab mix that was losing his eyesight, and Libby, the stray cat who began to guide the dog’s way through the house and yard. With Libby, Cashew lived out his last few years

with loving support and a lasting friendship. These are the most amazing friendships between species, collected from around the world and documented in a selection of full-color candid photographs. "The feel-good book of the summer—maybe the year—may very well be Unlikely Friendships." —USA Today "With aww-inducing photographs, the book highlights the most improbable animal connections." —National Geographic

An original, authoritative guide to the impact of grief on the brain, the heart, and the body of the bereaved. Grief happens to everyone. Universal and enveloping, grief cannot be ignored or denied. This original new book by psychologist Dorothy P. Holinger uses humanistic and physiological approaches to describe grief's impact on the bereaved. Taking examples from literature, music, poetry, paleoarchaeology, personal experience, memoirs, and patient narratives, Holinger describes what happens in the brain, the heart, and the body of the bereaved. Readers will learn what grief is like after a loved one dies: how language and clarity of thought become elusive, why life feels empty, why grief surges and ebbs so persistently, and why the bereaved cry. Resting on a scientific foundation, this literary book shows the bereaved how to move through the grieving process and how understanding grief in deeper, more multidimensional ways can help quell this sorrow and allow life to be lived again with joy. Visit the author's companion website for *The Anatomy of Grief*: [dorothypholinger.com](http://dorothypholinger.com)

Wild Rituals explores how embracing the rituals of the

animal kingdom can make us more connected to ourselves, nature, and others. Behavioral ecologist and world-renowned elephant scientist Caitlin O'Connell dives into the rituals of elephants, apes, zebras, rhinos, lions, whales, flamingos, and many more. This fascinating read helps us better understand how we are similar to wild animals, and encourages us to find healing, self-awareness, community, and self-reinvention. □ Filled with fascinating stories on 10 different animal rituals □ Features original full-color photos, from the Caribbean to the African savannah □ Demonstrates the profound way we are similar to the wild creatures who captivate us Wild Rituals journeys into the desert, tundra, and rainforest to reveal the importance of rituals and how they can help us find a simpler, more meaningful way of living. In a culture of technology where we find ourselves living at a greater distance from nature and each other, this remarkable book taps into the unspoken languages of creatures around the world. □ Caitlin O'Connell is on the faculty at Harvard Medical School and an award-winning author who spent more than 30 years studying animals in the wild. □ Makes a great gift for anyone curious about nature, animals, and how humans compare to and interact with both □ Add it to the shelf with books like Beyond Words: What Animals Think and Feel by Carl Safina; Are We Smart Enough to Know How Smart Animals Are? by Frans de Waal; The Inner Life of Animals: Love, Grief, and Compassion—Surprising Observations of a Hidden World by Peter Wohlleben; and The Soul of an Octopus: A Surprising Exploration into the Wonder of Consciousness by Sy Montgomery.
