Dimensional Analysis, also know as stoichiometry or the railroad method, is the only technique I recommend when solving dosage calculation equations in nursing school. I love dimensional analysis for 4 main reasons: 1. It's ridiculously simple to set-up

**How to Master Basic Dimensional Analysis for Dosage** **—**

The other benefit is that dimensional analysis works for all types of calculations – simple, complex, weight based, lots of conversions or super straight forward – it still works! And there's no need to do any separate conversions or rounding in the middle of the process. Everything happens with ONE final calculation.
