Introducing a NEW addition to our growing library of computer science titles, Algorithm Design and Applications, by

Michael T. Goodrich &
Roberto Tamassia!

Algorithms is a course
required for all
computer science
majors, with a strong
focus on theoretical
topics. Students enter
the course after gaining
hands-on experience
with computers, and are
expected to learn how
algorithms can be
applied to a variety of

contexts. This new book integrates application with theory. Goodrich & Tamassia believe that the best way to teach algorithmic topics is to present them in a context that is motivated from applications to uses in society, computer games, computing industry, science, engineering, and the internet. The

text teaches students about designing and using algorithms, illustrating connections between topics being taught and their potential applications, increasing engagement.

As the European Union (EU) launches its common currency (the Euro), Central European (CE) nations are searching for best practices in public liability management in order to smooth their integration into the EU. This work addresses that concern, examining

borrowing policies,
institution building,
portfolio optimization,
and the implications of
the Euro and EU
accession for public
debt management. To
help the CE countries
achieve their goals, the

European Union

Accession presents the papers delivered at that seminar which was attended by all ten EU applicant countries: Bulgaria, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, the Slovak Republic, and Slovenia. The workshop pursued the following goals: 1.

to investigate the implications of the launch of the Euro and of the EU accession on fiscal prudence and on the borrowing strategies of CE countries; 2. to facilitate the dissemination of the best public liabilities management techniques developed worldwide; and 3. to explore plausible arrangements
