major causes of land degradation in Ethiopia are rapid population increase, severe soil loss, deforestation, low vegetative cover and unbalanced crop and livestock production (Girma 2001). Topography, soil types and agro- ecological parameters are also additional factors playing significant role in the degradation processes influenced

Land Degradation in Ethiopia: Causes, Impacts and ...

Land degradation is the common environmental problem in Ethiopia. It is one of the major causes of low and declining agricultural productivity and continuing food insecurity and rural poverty. In addition, land degradation directly affected the type of plant grown on the area, reduced availability of potable water, lessened volumes of surface water, depletion of aquifers and biodiversity loss....

(PDF) Land Degradation in Ethiopia: Causes, Impacts and ...

The major causes of land degradation in Ethiopia are the rapid population increase, severe soil loss, deforestation, low vegetative cover and unbalanced crop and livestock production. Inappropriate land-use systems and land-tenure policies enhance desertification and loss of agrobiodiversity.

Read PDF Land Degradation In Ethiopia Causes Impacts And

Land degradation: A challenge to Ethiopia | International ...

The direct causes of land degradation are apparent and generally agreed : inappropriate forest clearance and soil surface exposure, detrimental crop cultivation practices, the burning of dung, removal of crop residues, and overgrazing are all familiar themes.

LAND DEGRADATION AND REHABILITATION IN ETHIOPIA: A ...

The high soil erosion rates in the Ethiopian highlands and their causes in the combination of erosive rains, steep slopes due to the rapid tectonic uplift during the Pliocene and Pleistocene, and human impact by deforestation, overgrazing, agricultural systems where the open field dominates, impoverishment of the farmers, and stagnation of agricultural techniques.

Land Degradation in the Ethiopian Highlands 21

Drivers of Land Degradation in Ethiopia. Poor land-use practices and population pressure are the major drivers of land degradation in Ethiopia (Genanew and Alemu 2012; Berry 2003). High population pressure, especially in the highland, has led to a decline in arable area, which in turn led to agricultural encroachment onto marginal areas.

Economics of Land Degradation and Improvement in Ethiopia ...

www.ijsrp.org Table 3.1 indicates, the main cause of land degradation are soil erosion by heavy rain (30.8%), clearances of forests for different purpose (27.7%), over population (15.4%), poor tillage (13.8%), over grazing (7.7%) and winds (4.6%) by which leads the people

Read PDF Land Degradation In Ethiopia Causes Impacts And

to inability to sustain their life, increase the food crisis and poverty.

Cause of Land Degradation and Its Impacts on Livelihoods ...

It causes land degradation through huge loss of top fertile soil along with plant nutrients through runoff water.

Land Degradation: 9 Main Causes of Land Degradation

The major causes of land use and cover change (LUCC) and land degradation in the area were population and livestock growth in regions of limited resources, unsustainable farming techniques, the Ethiopian land tenure system and poverty.

Continuing land degradation: Cause–effect in Ethiopia's ...

Land degradation is the common environmental problem in Ethiopia. It is one of the major causes of low and declining agricultural productivity and continuing food insecurity and rural poverty.

Land Degradation in Ethiopia: Causes, Impacts and ...

Soil degradation causes include agricultural, industrial, and commercial pollution; loss of arable land due to urban expansion, overgrazing, and unsustainable agricultural practices; and long-term climatic changes.

Soil Degradation - an overview | ScienceDirect Topics

Read PDF Land Degradation In Ethiopia Causes Impacts And

Soil erosion is a particular physical process that causes land and soil degradation, and refers to the wearing away of the land surface by water and/or wind as well as to the reduction in soil productivity due to physical loss of topsoil, reduction in rooting depth, removal of plant nutrients, and loss of water (Ibid.).

Cost of Land Degradation in Ethiopia: A Critical Review of ...

LAND DEGRADATION IN ETHIOPIA: ITS EXTENT AND IMPACT The Scope And Impact Of Land Degradation In Ethiopia Ethiopia is among the poorest of countries and poverty and land and resource degradation appear to feed off each other.

LAND DEGRADATION IN ETHIOPIA: ITS EXTENT AND IMPACT

The main causes of deforestation in Ethiopia are shifting agriculture, livestock production and fuel in drier areas. Deforestation is the process of removing the forest ecosystem by cutting the trees and changing the shape of the land to suit different uses.

Deforestation in Ethiopia - Wikipedia

Accelerated land degradation is most commonly caused as a result of human intervention in the environment. The effects of this intervention are determined by the natural landscape.

This volume deals with land degradation, which is occurring in almost all terrestrial biomes and

agro-ecologies, in both low and high income countries and is stretching to about 30% of the total global land area. About three billion people reside in these degraded lands. However, the impact of land degradation is especially severe on livelihoods of the poor who heavily depend on natural resources. The annual global cost of land degradation due to land use and cover change (LUCC) and lower cropland and rangeland productivity is estimated to be about 300 billion USD. Sub-Saharan Africa (SSA) accounts for the largest share (22%) of the total global cost of land degradation. Only about 38% of the cost of land degradation due to LUCC - which accounts for 78% of the US\$300 billion loss – is borne by land users and the remaining share (62%) is borne by consumers of ecosystem services off the farm. The results in this volume indicate that reversing land degradation trends makes both economic sense, and has multiple social and environmental benefits. On average, one US dollar investment into restoration of degraded land returns five US dollars. The findings of the country case studies call for increased investments into the rehabilitation and restoration of degraded lands, including through such institutional and policy measures as strengthening community participation for sustainable land management, enhancing government effectiveness and rule of law, improving access to markets and rural services, and securing land tenure. The assessment in this volume has been conducted at a time when there is an elevated interest in private land investments and when global efforts to achieve sustainable development objectives have intensified. In this regard, the results of this volume can contribute significantly to the ongoing policy debate and efforts to design strategies for achieving sustainable development goals and related efforts to address land degradation and halt biodiversity loss.

Read PDF Land Degradation In Ethiopia Causes Impacts And

This book provides a succinct but comprehensive presentation of key geomorphological locations and topics including information about geomorphological heritage and maps to visit the most important sites. Apart from often being remarkably scenic, landscapes reveal stories that often can be traced back in time tens of million years and include unique events. This is particularly true for Ethiopia where spectacular examples of different landforms are present. Its geomorphology varies from highlands, marked by high volcanoes and incised by deep river gorges, to the rift valley lakes endorheic systems and the below sea level lowlands with characteristic landscapes which are unique in the world. Landscapes and Landforms of Ethiopia highlights all these topics including essential information about geology and tectonic framework, past and present climate, hydrology, geographical regions and long-term geomorphological history. It is a highly informative book, providing insight for readers with an interest in geography and geomorphology.

Read PDF Land Degradation In Ethiopia Causes Impacts And

Poor land management has degraded vast amounts of land, reduced our ability to produce enough food, and is a major threat to rural livelihoods in many developing countries. This book provides a thorough analysis of the multifaceted impacts of land use on soils. Abundantly illustrated with full-color images, it brings together renowned academics and policy experts to analyze the patterns, driving factors and proximate causes, and the socioeconomic impacts of soil degradation.

Since the 1980s many developing countries have implemented macro-economic policy reforms to curb inflation, reduce fiscal deficits and control foreign debt. The policy instruments used, such as exchange rate adjustment, budget cuts, trade policy reforms, public expenditure reviews and privatisation, have different and sometimes opposite consequences for agricultural land use. During the same period awareness was growing that deteriorating soil quality could become a limiting factor to increase or even sustain agricultural production. As a result, food availability and even accessibility for large population groups in developing countries may be jeopardised in the near future. Recently, quantitative models have made useful contributions to understanding the impact of economic policy reforms on the sustainability of land use. They provide a consistent analytical framework to deal with complex issues such as the direct and indirect effects of economic, agricultural, environmental and population policies, the role of market imperfections in transmitting economic policy signals, and the interactions between soil

quality, agricultural production and household economic decision making. Different types of models can be distinguished: bio economic models, focussing on the link between farm household decisions and the agricultural resource base, household and village models, examining the impact of the socio-economic environment on farm household decisions, and more aggregate models, analysing interactions between sectors and their implications for sustainable land use.
