Microstrip and Printed Antennas: New Trends, Techniques ...
A new technology has been presented for the fabrication of microstrip antennas in general and for UHF frequencies in particular. These antennas are less expensive to construct than the traditional printed patches (they use one patch and no dielectric substrate) and also exhibit good electrical characteristics.

Advances in Microstrip and Printed Antennas | Wiley
The most common type of microstrip antenna is the patch antenna. Antennas using patches as constitutive elements in an array are also possible. A patch antenna is a narrowband, wide-beam antenna fabricated by etching the antenna element pattern in metal trace bonded to an insulating dielectric substrate, such as a printed circuit board, with a continuous metal layer bonded to the opposite side ...

Microstrip and Printed Antennas: New Trends, Techniques ...
Microstrip antennas have a large number of applications
despite their limitations. In some cases, pattern or bandwidth
requirements can only be met with planar antennas, which
are not a traditional microstrip configuration. These are
generally referred to as printed or planar antennas.
