~~Moisture control handbook: New, low-rise residential~~ ---

Moisture Control Handbook This book, while not written as a traditional textbook, has become a classic text on moisture control. It is not specifically a "science" book; the authors tend to explain mold, moisture, and condensation in nonscientific terms. Excellent graphics that hit every part of the building envelope.

If moisture accumulates beyond about 16% by weight, wood surfaces are likely to develop mold. In the average home approximately 4,000 to 5,000 lbs (1814 to 2267 kg) of wood are in the exterior walls. This yields a hygric buffer capacity of approximately 400 to 500 lbs (181 to 226 kg) of water or approximately 45 to 50 gallons (170 to 189 L).

~~Moisture Control Handbook Principles And Practices For~~ ---

Moisture accumulates in the building envelope when the rate of moisture entry into an assembly exceeds the rate of moisture removal. When moisture accu- mulation exceeds the ability of the as- ssembly materials to store the moisture without significantly degrading perfor- mance or long-term service life, moisture problems result.
