Natural-gas processing is a range of industrial processes designed to purify raw natural gas by removing impurities, contaminants and higher molecular mass hydrocarbons to produce what is known as pipeline quality dry natural gas. Natural-gas processing begins at the well head. The composition of the raw natural gas extracted from producing wells depends on the type, depth, and location of the underground deposit and the geology of the area. Oil and natural gas are often found together in the sa

Handbook of Natural Gas Transmission and Processing ...

Abstract. For natural gas to be available to the market, it must be gathered, processed, and transported. Quite often, collected natural gas (raw gas) must be transported over a substantial distance in pipelines of different sizes, due to drive for reduced field processing facilities particularly for offshore fields.

Handbook of Natural Gas Transmission and Processing ...

Natural gas processing consists of separating all of the various hydrocarbons and fluids from the pure natural gas, to produce what is known as 'pipeline quality' dry natural gas. Major transportation pipelines usually impose restrictions on the make-up of the natural gas that is allowed into the pipeline.

This five-day short course reviews the physical, chemical, and engineering principles used to understand the processing of natural gas and its by-products. Topics include: physical properties, phase equilibria and vapour liquid equilibrium calculations, water-hydrocarbon systems and natural gas dehydration, natural gas gathering and plant inlet separation, sour natural gas treating/sweetening, dew point control and NGL liquid recovery, acid gas compression and injection, sulphur recovery.

Shale oil extraction is an industrial process for unconventional oil production. This process converts kerogen in oil shale into shale oil by pyrolysis, hydrogenation, or thermal dissolution. The resultant shale oil is used as fuel oil or upgraded to meet refinery feedstock specifications by adding hydrogen and removing sulfur and nitrogen impurities.. Shale oil extraction is usually performed ...
