Policy-Based Network Management (PBNM) systems enable business rules and procedures to be translated into

Download Free Network

policies that configure and control the network and its services. Those who manage network systems are aware that this approach can benefit both network management as well as the development of applications that use network services; however, the details surrounding these systems has been

obscured by marketing
hype, numerous
acronyms, and
theoretical complexities.

Policy-Based Network

for the Next Generation
cuts through the hype
surrounding PBNM and
makes it approachable
for those who really

it has to offer. The

systems. As network
systems become larger

and more complex, creating policies for them has become a crucial step in the management of network systems, and this book is a welcome addition to this exciting approach. * Presents a completely new approach to PBNM that unites the business, system, and implementation spheres.

* As the basis for

Download Free Network

examples and discussion, uses the DEN-ng information model, an easy-to-understand open standard tied closely to eTOM and NGOSS. * Introduces the Ponder system, then examines Ponder extensions designed to enhance the structure of high-level policies and their application in a PBNM

system. * Filled with examples illustrating how policies are most effectively used in a PBNM system and what new directions PBNM is likely to take.
