PeopleSoft Application Engine provides a daemon process, called PSDAEMON, that runs continuously when PeopleSoft Process Scheduler. It polls the system, checking for certain conditions to occur. When the conditions are true, PSDAEMON schedules a process to handle the event. PSDAEMON supports limited tracing, because it runs indefinitely.

Understanding PeopleSoft Application Engine

Online Library Peoplesoft App Engine Do When Example

The Do When action is a Select statement that allows subsequent actions to be run if any rows of data are returned. This action is similar to a COBOL If statement. A Do When statement runs before any other actions in a step. If the Do When statement returns any rows, the next action is executed.

Specifying Actions - Oracle

The Do When in the above diagram can be replaced by Do While and Do Select, while checking for the number of iterations. The Do Actions will contain the SQL select statement as mentioned before and the Peoplecode will write the Emplid value to a File. In case of Do Until, Peoplecode will precede Do Until (as Do Until is the last action).

PeopleSoft Blog: Difference between do-while, do-when, do ...

To do this in application designer, select Tools -> Validate Project. In application designer select Insert -> Definitions into Project or press CTRL + F7. Select the Application Engine Programs definition type, find your application engine program and select all the related definitions. Press insert.

Application Engine | PeopleSoft Wiki

Application Engine 1. It is a PeopleTool and It is used to develop batch programs or online programs that perform the backed processing against the data. 2. It consists of the 2 distinct components. They are Designer->Consists of the batch programs.

PeopleSoft: App Engine

PeopleSoft Application Engine Interview Questions # 23) What does DO When action? A) The Do When action is a SELECT statement that allows subsequent actions to be executed if any rows of data are returned.

PeopleSoft Application Engine Interview Questions And ...

Most users start Application Engine programs from an application-specific request page using PeopleSoft Process Scheduler. A systems expert or power user may, at times, need to create custom process requests that require multiple programs to perform parallel processing or that need to set specific, initial values in a state record.

Running Application Engine Programs - Oracle

If you include other actions with your PeopleCode action within the same step, keep in mind the hierarchy when you run it. With PeopleCode actions, Application Engine runs the PeopleCode program before the SQL, Call Section, or Log Message actions, but a PeopleCode program runs after any program flow checks.

Using PeopleCode in Application Engine Programs

In today's competitive marketplace with its focus on profit, maintaining integrity can often be a challenge. Further complicating this challenge is the fact that those assigned to the task of assuring accountability within an organization often have little, if any, visibility into the inner workings of that organization. Oracle Identity Management: Governance, Risk, and Compliance Architecture is the definitive guide for corporate stewards who are struggling with the challenge of meeting regulatory compliance pressures while embarking on the path of process and system remediation. The text is written by Marlin Pohlman, a director with Oracle who is recognized as one of the primary educators worldwide on identity management, regulatory compliance, and corporate governance. In the book's first chapters, Dr. Pohlman examines multinational regulations and delves into the nature of governance, risk, and compliance. He also cites common standards, illustrating a number of well-known compliance frameworks. He then focuses on specific software components that will enable secure business operations. To complete the picture, he discusses elements of the Oracle architecture, which permit reporting essential to the regulatory compliance process, and the vaulting solutions and data hubs, which collect, enforce, and store policy information. Examining case studies from the five most regulated business verticals, financial services, retail, pharma-life sciences, higher education, and the US public sector, this work teaches corporation stewards how to: Attain and maintain high levels of integrity Eliminate redundancy and excessive expense in identity management Map solutions directly to region and legislation Hold providers accountable for contracted services Identity management is the first line of defense in the corporate internal ecosystem. Reconciling theory and practicality, this volume makes sure that defense is workable, responsive, and effective.

Are you new to PeopleSoft? Experienced, but somewhat baffled by PeopleSoft Security? Just wondering what the heck a Primary Permission List does anyway? Well, The Expert Guide to PeopleSoft Security is for you. The Expert Guide to PeopleSoft Security provides all the information you need to successfully
