Perl officially stands for Practical Extraction and Report Language, except when it doesn't. Perl was originally a language optimized for scanning arbitrary text files, extracting information from those text files, and printing reports based on that information. It quickly became a good language for many system management tasks.

Perl Documentation - Perldoc Browser
Perl used to be the most popular web programming language due to its text manipulation capabilities and rapid development cycle. Perl is widely known as "the duct-tape of the Internet". Perl can handle encrypted Web data, including e-commerce transactions. Perl can be embedded into web servers to speed up processing by as much as 2000%.

Perl - Quick Guide - Tutorialspoint
Module Docs Perl modules come with their own documentation. This includes modules installed from CPAN. On Unix-like (including Linux and Mac OS X) systems, you can access the documentation (for installed modules) with the perldoc command.

Docs - www.perl.org
-U allows Perl to perform unsafe operations.-v prints the version and patchlevel of your Perl executable.-V | :VAR| Prints Perl configuration information.-w prints warnings about possible spelling errors and other error-prone constructs in the script.-x[DIR] extracts Perl program from the input stream. |DIR is specified, switches

Perl User Guide
Perl used to be the most popular web programming language due to its text manipulation capabilities and rapid development cycle. Perl is widely known as "the duct-tape of the Internet". Perl can handle encrypted Web data, including e-commerce transactions. Perl can be embedded into web servers to speed up processing by as much as 2000%. Perl'smod_perlallows the Apache web server to embed a Perl interpreter. Perl'sDBIpackage makes web-database integration easy.

Perl - Tutorialspoint
If you are a Win32 user, please refer to the Win32 installation document. First, download the mod_perl 2.0 source. Before installing mod_perl, you need to check that you have the mod_perl 2.0 prerequisites installed. Apache and the right Perl version have to be built and installed before you can proceed with building mod_perl.

User's guide - mod_perl: Welcome to the mod_perl world
Any Perl/Tk application starts by creating the Tk MainWindow. You then create items inside the MainWindow, and/or create new windows called Toplevel s that also contain child items, before starting the MainLoop, which is the last logical statment in your program. You can also create more items and windows while you're running, using callbacks.
