The genes encoded in your DNA
result in the production of
proteins that perform specific
functions within your cells.

Various environmental factors
and spontaneous events can lead
to changes in genes. These
changes, called mutations, can
lead to alterations in the structure
and activity of the proteins your
cells use in their daily activities.

A POGIL activity guides students through an exploration to construct, deepen, refine, and/or integrate understanding of relevant disciplinary content. The application and development of at least one of the targeted process skills is embedded in the structure and/or content of a POGIL activity and is not solely dependent upon the facilitation of the activity in the classroom or laboratory.
