This book explores possible and impossible word meanings, with a specific focus on the meanings of verbs. John Beavers and Andrew Koontz-Garboden adopt the now common view that verb meanings consist at least partly of an event structure, made up of two elements: an event template describing the verb's broad temporal and causal contours, which occurs across lots of verbs and groups them into semantic and grammatical classes; and an idiosyncratic root describing specific, real world states and actions that distinguish between verbs with the same template. While much work has focused on templates, less work has addressed the truth-conditional contributions of roots, despite the importance of a theory of root meaning in fully defining the predictions made by event structural approaches. This book aims to address this gap by exploring two previously proposed constraints on root meaning: The Bifurcation Thesis of Roots, whereby roots never introduce the meanings introduced by templates, and Manner/Result Complementarity, which specifies that roots can describe either a manner or a result state but never both at the same time. Two extended case studies, on change-of-state verbs and ditransitive verbs of caused possession, show that neither hypothesis holds, and that ultimately there may be no constraints on what a root can mean. Nonetheless, the book argues that event structures still have predictive value: it presents a new theory of possible root meanings and their interaction with event templates that produces a new typology of possible verbs, in which systematic semantic and grammatical properties are determined not just by templates, but also by roots.

Because the field of plastics is one of the fastest changing areas today, the need arises to offer relevant, comprehensive material on polymers. An established source of information on modern plastics, the Plastics Technology Handbook continues to provide up-to-date coverage on the properties, processing methods, and applications of polymers. Retaining the easy-to-follow structure of the previous editions, this fourth edition includes new topics of interest that reflect recent developments and lead to better insights into the molecular behavior of polymers. New to the Fourth Edition Advances in supramolecular polymerization, flame retardancy, polymer-based nanomedicines, and drug delivery The new concept of oxo-biodegradable polymers Broadened discussion on plastic foams and foam extrusion processes More information on the processing and applications of industrial polymers, including the emerging field of nanobends Developments in polymer synthesis and applications, such as polymeric sensors, hydrogels and smart polymers, hyperbranched polymers, shape memory polymers, polymeric optical fibers, scavenger resins, polymer nanocomposites, polymerization-filled composites, and wood-polymer composites A state-of-the-art account of the various available methods for plastics recycling Advances in the use of polymers in packaging, construction, the automotive and aerospace industries, agriculture, electronics and electrical technology, biomedical applications, corrosion prevention, and sports and marine applications Plastics Technology Handbook, Fourth Edition thoroughly covers traditional industrial polymers and their processing methods as well as contemporary polymeric materials, recent trends, and the latest applications.
