Solution. $A = \{ x \in \mathbb{Q} \mid -100 \leq x \leq 100 \}$ is countable since it is a subset of a countable set, $A \subset \mathbb{Q}$. $B = \{ (x, y) \mid x \in \mathbb{N}, y \in \mathbb{Z} \}$ is countable because it is the Cartesian product of two countable sets, i.e., $B = \mathbb{N} \times \mathbb{Z}$. $C = (0, .1]$ is uncountable since it is an interval of the form $(a, b]$, where $a < b$.

Set Theory Problems: Solutions 1. True. Suppose $(a;c) \supseteq A \cap C$. Then $a \in A$ and, since $A \subseteq B$, we have that $a \in B$. Similarly, $c \in C$ and $C \subseteq D$ implies $c \in D$. Therefore, $(a;c) \subseteq B \cap D$. We may conclude that $A \cap C \subseteq B \cap D$. 2. True. There are many such bijections; the following is just one example. Define the function $f : (0;1) \rightarrow \mathbb{R}$ by $f(x) = \tan(\frac{\pi}{2}x)$. 3. True. Suppose not.

Solved basic word problems on sets: 1. Let A and B be two finite sets such that $n(A) = 20$, $n(B) = 28$ and $n(A \cup B) = 36$, find $n(A \cap B)$. Solution: Using the formula $n(A \cup B) = n(A) + n(B) - n(A \cap B)$, then $n(A \cap B) = n(A) + n(B) - n(A \cup B) = 20 + 28 - 36 = 48 - 36 = 12$.

Set Theory "A set is a Many that allows itself to be thought of as a One." (Georg Cantor) In the previous chapters, we have often encountered "sets", for example, prime numbers form a set, domains in predicate logic form sets as well. Defining a set formally is a pretty delicate matter, for now, we will be happy to consider an intuitive de ...

A set X is a subset of a set Y (or $X \subseteq Y$) if all elements X are also elements of Y . That is if for all x , $x \in X$ implies $x \in Y$, or in symbols $\forall x(x \in X \rightarrow x \in Y)$ For example, $\text{Reptile} = \text{snake} \cup \text{alligator} \subseteq \text{Animal}$ We can also give a subset by taking all the elements that satisfy a particular property. For example, the set E of even natural ...

Math: Sets & Set Theory (video lessons, examples and ...
By 1900, set theory was recognized as a distinct branch of mathematics. At just that time, however, several contradictions in so-called naive set theory were discovered. In order to eliminate such problems, an axiomatic basis was developed for the theory of sets analogous to that developed for elementary geometry.
