Statistics Probability Examples And Solutions

Let's see the first of our descriptive statistics examples. Example 1: Descriptive statistics about a college involve the average math test score for incoming students. It says nothing about why the data is so or what trends we can see and follow. Descriptive statistics help you to simplify large amounts of data in a meaningful way. It reduces lots of data into a summary. Example 2:

Descriptive Statistics Examples, Types and Definition

Solution: Using the formula: $\text{Sum} = \text{Mean} \times \text{Number of numbers}$. Sum of original 6 numbers = $20 \times 6 = 120$. Sum of remaining 5 numbers = $15 \times 5 = 75$. Number removed = sum of original 6 numbers - sum of remaining 5 numbers
Number removed = $120 - 75 = 45$.

Alternative Method: Let x be the removed number . The removed number is 45 . Example:
