The engine works by using heat from a candle to evaporate water, which creates steam to form jets that propel the engine. To start, cut the bottom off of a soda can and place a tea light in it. Then, slide the copper tubing through 2 holes in the can, place it in a bowl of water, and bend the ends so they are submerged.

Occasionally when starting a compound engine there can be dead spots at the top and bottom of the small piston's travel because at the outset it is the only one supplied with steam. Once the engine is running there are no dead spots. During each revolution expanded exhaust steam from the small cylinder is being supplied to the large cylinder.

This book details the construction of a range of simple miniature steam engines and boilers. The projects, each of which can be completed with only a basic workshop, range from a single-acting oscillator to more sophisticated twin-cylinder double-acting engines and a variety of boilers. A final project brings together engine and boiler for a simple steam railway locomotive. These projects are a perfect introduction to model engineering and an enjoyable exercise for the more experienced engineer or those who wish to pass on their hobby to a younger generation. Stan Bray is an experienced craftsman in engineering and metalworking; among his previous books is *Metalworking: Tools and Techniques*.

This practical, instructional book describes the construction of a model of the Lampitt portable steam engine, which dates back to 1862, and which provided rotative power to drive threshing machines, circular saws, feed mills and other farm machinery. The construction of every component is described in precise detail and the text is supported by many helpful step-by-step photographs. In addition, useful advice is provided about obtaining materials and about the tools that are required to equip a model-engineering workshop. Accordingly, the information provided in this fascinating book will enable the reader to construct not only the Lampitt engine but also many other engineering models in the future. When the reader has finished building 'the Lampitt' he will, in effect, have completed an engineering apprenticeship, and will have a model engine of which he
