Where To Download

In order to use an RTC, we need to first program it with the current date and time. Once this is done, the RTC registers can be read at any time to know the time and date. DS1307 is an RTC that works on I2C protocol. For information on DS1307 and how to use it, refer to the topic Real-Time Clock RTC DS1307

Projects

Because the DS1307 is an I2C device (I2C is a 2-wire serial connection), you just need to connect the SDA (Data) and SCL (Clock) lines to your Arduino for communication. On your Arduino (all boards but the mega) SDA is on analog pin 4, and SCL is on analog pin 5. On an

Where To Download

Arduino mega, SDA is digital 20, and SCL is digital 21.

PIC16F877A - DS1307

The DS1307 then begins to transmit data starting with the register address pointed to by the register pointer. If the register pointer is not written to before the initiation of a read mode, the first address that is read is the last one stored in the register pointer. The DS1307 must be sent a Not-

Well, basically we can

Where To Download

use a microcontroller to keep time, but the value would go off as soon as it is powered off. The RTC DS1307 is a handy solution to keep time all the way, when it is powered by a coin cell. It uses I²C (Inter-Integrated Circuit) protocol, referred to as I-squared-C, I-two-C, or IIC for communication with the microcontroller.
